PIZZA

HELLO !

I am Aditi Bankar. In this project, I have harnessed the power of SQL queries to address various questions related to pizza sales. By effectively utilizing SQL, I have been able to extract, analyze, and present insightful data that sheds light on sales trends, customer preferences, and overall business performance. Through this analysis, key metrics such as total sales, most popular pizza toppings, peak sales hours, and customer demographics have been uncovered. This data-driven approach not only aids in making informed business decisions but also paves the way for strategies that can enhance customer satisfaction and drive revenue growth.

Retrieve the total number of orders placed.

```
SELECT  
    COUNT(order_id) AS total_orders  
FROM  
    orders;
```
